

REFURBISHMENT RIVER PARK LEISURE CENTRE WINCHESTER

Studio Four were initially appointed to carry out a feasibility study for a broad range of improvements to River Park Leisure Centre, which included works to the existing changing areas, possible removal of the flume and maintenance to the roof. The study was presented to the council and their operator (DC Leisure) who wished to proceed with refurbishments to the various wetside and dryside changing, shower and wc facilities, works to the roof and removal of the flume. The works were to be combined with extensive replacement and upgrade of the swimming pool plant.

The comprehensive package of works required the wetside to be shutdown for three months. Other areas were closed for shorter periods and staggered to ensure vital facilities remained open. The contractor, council, operator and design team worked closely together to ensure this shutdown period was minimised and managed as a delay was not permissible. The project was successfully completed on time and brought many of the dated areas up to modern standards.
